

# AssignorPro™ – The Referee Assignment System Product Brief

The AssignorPro™ Referee Assignment System is a Microsoft™ Windows based software application that will provide the Referee Assignor with the tools and controls to effectively manage match assignments in a timely and accurate manner. The system is easy to install and maintain from the AssignorPro.com website. The PC based system is an advantage over web-based assignment systems in that you always have access to your assignments for easy, fast maintenance. The system is presently configured to manage the assignment of officials to soccer matches. AssignorPro™ was developed from the successful Tournament Administrative System in use by the regional and national youth championships for over fourteen years.

Data management is provided through related data tables that minimizes the re-entry of repeated information. Data maintenance on officials is done through an easy to use data entry form that separates data into subject matters through tabbed pages. This data is then used throughout the AssignorPro system.

Scheduling, site locations, leagues, tournaments and school information are entered and maintained through similar data entry forms. This data may also be imported through standard or custom format XLS, DBF or Delimited files. Assignment data may also be exported to AssessorPro to speed up the setup of assessment data on that system.

Code	Unavailable	Unit	P
0001	01/03/2009	001	0000
0002	01/03/2009	001	0000
0003	01/03/2009	001	0000

Game assignments are managed through a single data form that brings together all of the assignment related information such as Officials, Games Schedule, and locations. Controls are in place to prevent assignment of officials who already have assignments at the same time. Officials who have indicated unavailability for specific time periods during a day or over a period of days will not be available for assignment. Additionally, warnings and reports are presented to inform the Assignor when officials may have previously officiated these teams, when assignments are geographically problematic or when there may be conflicts of interest due to affiliation with competing teams. Previous assignments as well as Official's ratings and recommended age level limitations are displayed during the assignment process to allow the Assignor to make informed assignment decisions.

A Web based option is available to post assignments, manage acceptance of assignments, collect Referee availability, game schedules, unassigned games available for assignment, news and special rules and regulations. See [www.AssignorPro.com/ASPDemo](http://www.AssignorPro.com/ASPDemo) for web examples.

Reporting and Official Assignment Notification through printed letters, email and 4 X 5 cards are produced on demand. Additionally, worksheets can be created to assist the assignor with the assignment process. Reports can be produced to document assignments made for the use of leagues, schools or tournaments for Assignor reimbursement. Complete Backup and Restore functions. Most reports may be output to Adobe Acrobat formatted files and emailed to other parties directly from the application.

On demand, context sensitive help is available for each module of the system. A 60 minute interactive tutorial is provided to reduce the learning time. A Demo/10-Day-Trial version is available.

System Requirements: Microsoft™ Windows Operating System, 512MB RAM, 30MB disk space available for the application and data storage, CD-ROM drive, Internet connection for Email of assignments and reports, a laser or inkjet printer. AssignorPro™ is licensed to only one PC.
